USB Link Specifications

LED ON:	Indicates the USB Link is connected and software recognizes the connection.
LED OFF:	Reconnect the USB Link to the USB port or hub.
One-way Connection:	Align the notch on the USB Link with the groove on the sensor or sensor plug.
Hot Plugging:	USB Links can be connected to or disconnected from a USB port without turning off the computer.

USB Link Quick Start

The PS-2100A USB Link is a simple PASPORT Link Device that allows PASPORT sensors to communicate with a USB-compatible computer.

The Universal Serial Bus (USB) is a computer protocol that allows advanced communications between peripherals (e.g. sensors, keyboards, mouse devices, monitors, printers, etc.) and your computer.

Computer Requirements

- At least one USB port
- EZscreen or DataStudio Software (version 1.5 or later)
- **Macintosh** - Mac OS 8.6 or higher
- **Windows** - Windows 98 or 2000

Equipment Setup

1. Install the EZscreen software included with all PASPORT sensors. EZscreen software only needs to be installed once.
2. Connect a PASPORT sensor or sensor plug to the USB Link.
3. Connect the USB Link to a USB port on your computer or USB hub. (Look for the USB icon shown to the right.)
4. The software launches when it detects a PASPORT sensor. Select **EZscreen** or **DataStudio**.
